Introduction

The phosphoric acid fuel cells (PAFC) are the most advanced among the various types of fuel cells developed so far and are now at the pre-commercialization stage. The PAFC research and development activity is in its very initial stages in India. This bibliography has been compiled with a view to act as an informative source for researchers in this field. The comprehensive literature search has been carried out from various sources of information like Chemical Abstracts, Energy Abstracts, and Direct Energy Conversion Bulletin. References from numerous journals, seminar proceedings, patents and reports have been compiled in this bibliography.

This document includes research work published during the period 1975 to 1985. The material listed in this document has been divided in two sections. The first section contains references and serialized texts, arranged in alphabetical order according to author (first author's name as it appears in the publications), no more than three authors are listed for any reference. In the second section, references have been classified under specific subject areas in this technology and are given as reference numbers under different keywords.

The existing data base is expected to be updated annually. I wish to thank Mr.M.Karuppasamy of Computer Center for his valuable support and Ms. Anupam Chopra for handling the word processing work.
